Product task

Determine one thing Duolingo could improve and create a 1-3 page product specification document for your proposal. The scope of your change should be something that can be achieved by 1-4 engineers in 3-6 months (for example, a UI bug fix is too small, and a Virtual Reality app is too big).

Product specs typically include objectives, a feature set, desired impact, a proposed engineering timeline, and risks. The document should communicate enough information that the design and engineering team would know how to get started.

Stretch goal

If possible, include wireframe mocks to demonstrate the UI flow for your project. These may be as high or low fidelity as you choose. We understand you are busy, so this step is optional.
